

HIKO Ultrasound Diffuser

Important note: Only 100% pure chemotype essential oils are to be used for optimal therapeutic benefits.

What are ultrasonic diffusers?

Ultrasonic essential oil diffusers use water as vehicle to disperse essential oil molecules into the air in the form of a fine mist. Ultrasonic vibrations (frequencies) are applied by means of a small disk underneath the surface of the water in the diffuser reservoir, to break up essential oils into micro particles. Due to this cold ultrasonic diffusion, droplets are torn off the surface of the liquids, so that the water together with the essential oil added to it, is "atomized" into droplets so fine that they evaporate in fog. Cold ultrasonic diffusion also keeps the molecular structures intact and protected from deterioration.

One of the benefits of ultrasonic diffusers is that they use small amounts of essential oils. This method of diffusion can also act as both a diffuser and as a humidifier... which comes in handy when one lives in a drier climate. There is little or no noise associated with ultrasonic diffusers and this makes them excellent for night time use. The mist generated by ultrasonic diffusers, however, has a slightly lesser fraction of essential oil, than its nebulizing partner has. This type of diffusers is excellent for bedrooms, and in particular baby rooms, when night time diffusing is required.

With any essential oil diffuser the essential oils are absorbed into the bloodstream via the olfactory bulb in the nose, having their molecules reaching every cell in the body within minutes.

Why did we choose HIKO diffusers in our home?

We chose the HIKO ultrasonic diffusers in our home, because of their attractive-, stylish- and stable bamboo wooden bases, together with their opaque glass tops fitted over the reservoirs. They are virtually totally quiet and can give us up to six hours of non-stop diffusion fragrance in our home. They are excellent to use in bedrooms during the night... simply because the light can be switched off while dispersing healing molecules for sound- and relaxed sleep. Melatonin can only be synthesized by the pineal gland during darkness. This hormone is of paramount importance to keep our sleep pattern in balance and healthy.

Features of the HIKO diffuser:

This HIKO diffuser allows fragrance to permeate rooms up to 40m² in size. Five to seven drops of essential oils per diffusion session are usually enough. The 110ml water reservoir of this diffuser is made of hard plastic. You are able to choose the time of diffusion: 1 hour, 2 hours, 3 hours, or 6 hours of continuous diffusion. When switching the diffuser "ON", all three lights are going on (approx. 6 hour diffusion session). When then pressing the left white button, only the lower light goes on (1 hour diffusion session). At the second press the middle light goes on (2 hour diffusing session). At the third press, the upper light goes on (3 hour diffusing session).

Rest assured, regardless of your choice of diffuser, the fragrances of your God's Garden Gifts essential oils have the potential to uplift, invigorate and to generate an overall feeling of well-being. ENJOY!
