

## NOBILÉ Dry Cold-air Nebulizing Diffuser

*Important note: Only 100% pure chemotype essential oils are to be used for optimal therapeutic benefits.*

### What are nebulizing diffusers?

Nebulizing essential oil diffusers break essential oils down into minute particles by way of high velocity, through pressurized air and a jet nozzle. These particles consist of millions of molecular structures and are jetted into the air in a fine mist... their therapeutic benefits being utilized by those fortunate to be in their midst (and mist). Diffusing via these diffusers does not alter the chemical structures, or fragrance of the essential oil(s) diffused.

The benefit of dry cold-air nebulizing diffusers is that the entire essential oil is dispersed into the air at once with a stronger force and fragrance than other types of diffusers, making immediately available a much denser concentration of molecules. Other diffusion methods tend to diffuse the more volatile molecules first and then the less volatile ones... with a lesser force. The nebulizing method, however, is very beneficial, especially when diffused in a room where a seriously ill patient is in dire need of these healing molecules in the highest possible concentration at any given time. Essential oils are absorbed into the bloodstream via the olfactory bulb in the nose, having their molecules reaching every cell in our body within minutes.

### Why did we choose NOBILÉ diffusers in our home?

We chose the nebulizing NOBILÉ diffusers, besides the other ultrasonic ones we have, because of their sleek and stylish wooden-based design, together with their loose, elegant glass-blown reservoir and –dispenser on top. To us the ambience these diffusers provide with their continuous colour-revolving lights, is indispensable. We also know to handle glass-blown nebulizing diffusers with tender loving care. That is why we enjoy them for more than a decade already. Nebulizing diffusers are usually noisier than ultrasonic diffusers, but we ultimately chose the NOBILÉ for its remarkable quietness.

### Features of the NOBILÉ diffuser:

The NOBILÉ allows fragrance to permeate rooms up to 100m<sup>2</sup> in size. Ten- to twelve drops of essential oils per diffusion session are usually enough. It is, however, very economical in relation to its power. The soft, colour-revolving LED lamp of the NOBILÉ diffuser gives a lovely atmosphere. Bear in mind, however, to manually switch off this device during sleep in a bedroom at night, as the light does not switch off after a diffusing session has finished the cycle.

The diffusing intensity can be adjusted using the power controller switch. This NOBILÉ diffuser has a maximum diffusing session of 2 hours, with being intermittently on and off.

Rest assured, regardless of your choice of diffuser, the fragrances of your God's Garden Gifts essential oils have the potential to uplift, invigorate and to generate an overall feeling of well-being. ENJOY!
